

Metabolic Pathways slide 1 of 40

CAPY-DECK-CANARY-GLYCOLYSIS

Glycolysis Step 1: glucose to glucose-6-phosphate.

The Krebs cycle oxidizes acetyl-CoA; ATP synthase finishes the job.

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

Metabolic Pathways slide 2 of 40

CAPY-DECK-CANARY-GLYCOLYSIS

Glycolysis Step 1: glucose to glucose-6-phosphate.

The Krebs cycle oxidizes acetyl-CoA; ATP synthase finishes the job.

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

Metabolic Pathways slide 3 of 40

CAPY-DECK-CANARY-GLYCOLYSIS

Glycolysis Step 1: glucose to glucose-6-phosphate.

The Krebs cycle oxidizes acetyl-CoA; ATP synthase finishes the job.

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

Metabolic Pathways slide 4 of 40

CAPY-DECK-CANARY-GLYCOLYSIS

Glycolysis Step 1: glucose to glucose-6-phosphate.

The Krebs cycle oxidizes acetyl-CoA; ATP synthase finishes the job.

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

Metabolic Pathways slide 5 of 40

CAPY-DECK-CANARY-GLYCOLYSIS

Glycolysis Step 1: glucose to glucose-6-phosphate.

The Krebs cycle oxidizes acetyl-CoA; ATP synthase finishes the job.

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

Metabolic Pathways slide 6 of 40

CAPY-DECK-CANARY-GLYCOLYSIS

Glycolysis Step 1: glucose to glucose-6-phosphate.

The Krebs cycle oxidizes acetyl-CoA; ATP synthase finishes the job.

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

Metabolic Pathways slide 7 of 40

CAPY-DECK-CANARY-GLYCOLYSIS

Glycolysis Step 1: glucose to glucose-6-phosphate.

The Krebs cycle oxidizes acetyl-CoA; ATP synthase finishes the job.

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

Metabolic Pathways slide 8 of 40

CAPY-DECK-CANARY-GLYCOLYSIS

Glycolysis Step 1: glucose to glucose-6-phosphate.

The Krebs cycle oxidizes acetyl-CoA; ATP synthase finishes the job.

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

Metabolic Pathways slide 9 of 40

CAPY-DECK-CANARY-GLYCOLYSIS

Glycolysis Step 1: glucose to glucose-6-phosphate.

The Krebs cycle oxidizes acetyl-CoA; ATP synthase finishes the job.

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

Metabolic Pathways slide 10 of 40

CAPY-DECK-CANARY-GLYCOLYSIS

Glycolysis Step 1: glucose to glucose-6-phosphate.

The Krebs cycle oxidizes acetyl-CoA; ATP synthase finishes the job.

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

Metabolic Pathways slide 11 of 40

CAPY-DECK-CANARY-GLYCOLYSIS

Glycolysis Step 1: glucose to glucose-6-phosphate.

The Krebs cycle oxidizes acetyl-CoA; ATP synthase finishes the job.

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

Metabolic Pathways slide 12 of 40

CAPY-DECK-CANARY-GLYCOLYSIS

Glycolysis Step 1: glucose to glucose-6-phosphate.

The Krebs cycle oxidizes acetyl-CoA; ATP synthase finishes the job.

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

Metabolic Pathways slide 13 of 40

CAPY-DECK-CANARY-GLYCOLYSIS

Glycolysis Step 1: glucose to glucose-6-phosphate.

The Krebs cycle oxidizes acetyl-CoA; ATP synthase finishes the job.

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

Metabolic Pathways slide 14 of 40

CAPY-DECK-CANARY-GLYCOLYSIS

Glycolysis Step 1: glucose to glucose-6-phosphate.

The Krebs cycle oxidizes acetyl-CoA; ATP synthase finishes the job.

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

Metabolic Pathways slide 15 of 40

CAPY-DECK-CANARY-GLYCOLYSIS

Glycolysis Step 1: glucose to glucose-6-phosphate.

The Krebs cycle oxidizes acetyl-CoA; ATP synthase finishes the job.

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

Metabolic Pathways slide 16 of 40

CAPY-DECK-CANARY-GLYCOLYSIS

Glycolysis Step 1: glucose to glucose-6-phosphate.

The Krebs cycle oxidizes acetyl-CoA; ATP synthase finishes the job.

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

Metabolic Pathways slide 17 of 40

CAPY-DECK-CANARY-GLYCOLYSIS

Glycolysis Step 1: glucose to glucose-6-phosphate.

The Krebs cycle oxidizes acetyl-CoA; ATP synthase finishes the job.

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

Metabolic Pathways slide 18 of 40

CAPY-DECK-CANARY-GLYCOLYSIS

Glycolysis Step 1: glucose to glucose-6-phosphate.

The Krebs cycle oxidizes acetyl-CoA; ATP synthase finishes the job.

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

Metabolic Pathways slide 19 of 40

CAPY-DECK-CANARY-GLYCOLYSIS

Glycolysis Step 1: glucose to glucose-6-phosphate.

The Krebs cycle oxidizes acetyl-CoA; ATP synthase finishes the job.

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

Metabolic Pathways slide 20 of 40

CAPY-DECK-CANARY-GLYCOLYSIS

Glycolysis Step 1: glucose to glucose-6-phosphate.

The Krebs cycle oxidizes acetyl-CoA; ATP synthase finishes the job.

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

Metabolic Pathways slide 21 of 40

CAPY-DECK-CANARY-GLYCOLYSIS

Glycolysis Step 1: glucose to glucose-6-phosphate.

The Krebs cycle oxidizes acetyl-CoA; ATP synthase finishes the job.

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

Metabolic Pathways slide 22 of 40

CAPY-DECK-CANARY-GLYCOLYSIS

Glycolysis Step 1: glucose to glucose-6-phosphate.

The Krebs cycle oxidizes acetyl-CoA; ATP synthase finishes the job.

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

Metabolic Pathways slide 23 of 40

CAPY-DECK-CANARY-GLYCOLYSIS

Glycolysis Step 1: glucose to glucose-6-phosphate.

The Krebs cycle oxidizes acetyl-CoA; ATP synthase finishes the job.

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

Metabolic Pathways slide 24 of 40

CAPY-DECK-CANARY-GLYCOLYSIS

Glycolysis Step 1: glucose to glucose-6-phosphate.

The Krebs cycle oxidizes acetyl-CoA; ATP synthase finishes the job.

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

Metabolic Pathways slide 25 of 40

CAPY-DECK-CANARY-GLYCOLYSIS

Glycolysis Step 1: glucose to glucose-6-phosphate.

The Krebs cycle oxidizes acetyl-CoA; ATP synthase finishes the job.

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

Metabolic Pathways slide 26 of 40

CAPY-DECK-CANARY-GLYCOLYSIS

Glycolysis Step 1: glucose to glucose-6-phosphate.

The Krebs cycle oxidizes acetyl-CoA; ATP synthase finishes the job.

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

Metabolic Pathways slide 27 of 40

CAPY-DECK-CANARY-GLYCOLYSIS

Glycolysis Step 1: glucose to glucose-6-phosphate.

The Krebs cycle oxidizes acetyl-CoA; ATP synthase finishes the job.

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f

glucose glycolysis pyruvate dehydrogenase citrate synthase electron transport oxidative phosphorylation metabolic f
