Heading 6

Text marks & styles

plain · **bold** · *italic* · underline · ~~strike~~ · inline code · Ctrl+B · highlight · H₂O · E=mc²

colored · tinted · larger · serif sample

Inline link: [OpenStax Biology](#) · mention @Kate Malone · inline math $\Delta G = \Delta H - T\Delta S$.

Alignment

Left-aligned paragraph (default).

Center-aligned paragraph.

Right-aligned paragraph.

Justify-aligned paragraph: membranes separate compartments so gradients can do work across the bilayer.

Lists

- Bulleted item — organelles
 - Bulleted item — membranes
1. Numbered step — isolate the variable
 2. Numbered step — apply the model
- ☒ Todo checked — skim the matrix
 - ☐ Todo open — try each toolbar control

Quote & divider

“Nothing in biology makes sense except in the light of evolution.” — Theodosius Dobzhansky

Callout variants

Info

Info callout — background reading is linked above.

Success

Success callout — you covered every non-media block.

Warning

Warning callout — osmolarity units trip people up.

Danger

Danger callout — do not confuse lysis with crenation.

Code block

```
def atp_yield(glucose_mol: float) -> float:
    """Rough aerobic yield (~30-32 ATP / glucose)."""
    return glucose_mol * 30
```

Table

Process	Location	ATP net
Glycolysis	Cytosol	2
Krebs cycle	Mitochondrial matrix	2
ETC / oxidative phosphorylation	Inner membrane	~28

Columns

Two-column left — structure.

Two-column right — function.

Prokaryote

Eukaryote animal

Eukaryote plant

Wide column: endosymbiotic origin of mitochondria.

Narrow: DNA circular.

Respiration overview

Quiz block

Question 1

(a) Marks: 1

Where does glycolysis occur?

- A. Cytosol
- B. Nucleus
- C. Golgi lumen

Question 2

(a) Marks: 1

Which organelles contain their own DNA? (multi)

- ☐ Mitochondria
- ☐ Lysosomes
- ☐ Chloroplasts

Question 3

(a) Marks: 1

Ribosomes are present in both prokaryotes and eukaryotes.

☐ True ☐ False

Question 4

(a) Marks: 1

The main short-term energy carrier is _____.

Answer: _____

Quiz answer key

1. Answer

A. Cytosol

Marking scheme · Marks: 1

- Glycolysis occurs in the cytosol of the cell.

Worked solution

Glycolysis occurs in the cytosol of the cell.

2. Answer

A. Mitochondria

C. Chloroplasts

Marking scheme · Marks: 1

- Both mitochondria and chloroplasts have their own DNA.

Worked solution

Both mitochondria and chloroplasts have their own DNA.

3. Answer

True

Marking scheme · Marks: 1

- True — ribosomes are not membrane-bound.

Worked solution

True — ribosomes are not membrane-bound.

4. Answer

ATP

adenosine triphosphate

Marking scheme · Marks: 1

- ATP is the cell's short-term energy currency.

Worked solution

ATP is the cell’s short-term energy currency.

Flashcards block

Card 1

Front: What does ATP stand for?

Back: Adenosine triphosphate — cellular energy currency

Card 2

Front: Define osmosis

Back: Diffusion of water across a semi-permeable membrane

End of matrix. Media uploads (img / audio / file) are omitted on purpose.

Comparison

	One	Two
A	2	3
B	4	1
